

LIMBER

The science of a more adaptable mind.

A global, neuroplasticity-core daily practice that trains your brain the way the science actually says it changes
— and refuses the claims the evidence won't support.

Capstone • Research → Strategy → Personas → Flows → Prototype • June 2026

A huge, fast market — poisoned by overclaiming

**\$9.94B→22.7
B**

mental-health apps, ~18% CAGR

MarketsandMarkets

~\$53B

neurotech by 2034 (~13-14%)

Precedence/Fortune BI

55→139M

people with dementia (2050)

Alzheimer's Disease Intl

\$2M

FTC fine that defined the
category

Lumosity, 2016

The category's defining failure is dishonesty.

Brain games over-promise (far-transfer to real-world cognition is null). Wellness apps ride a neuroscience halo they can't back.

~70% of these apps are abandoned within 100 days. The market is starved of a credible, integrated, HONEST option.

Neuroplasticity is real — but gated, specific, and slow

The brain changes across life, but only under the right conditions. That gives an ownable, defensible recipe.

Attention / deliberate practice

The gate — passive exposure doesn't rewire

Strong

Aerobic exercise → BDNF

Lowers the LTP threshold

Strong

Sleep & spaced learning

Where consolidation happens

Strong

Stress regulation

Chronic cortisol closes the window

Strong

Novelty

Dopamine primes encoding

Strong

Mindfulness structure / 'rewiring'

Null in RCT; meta-analysis retracted

Not claimed

Kleim & Jones' 10 Principles → the Limber recipe

The most-cited framework for turning plasticity science into design. Limber is built on it.

- 1 Use it or lose it
- 2 Use it & improve it
- 3 Specificity (train the named skill)
- 4 Repetition matters
- 5 Intensity matters (effort)
- 6 Time matters (spacing)
- 7 Salience matters (meaning)
- 8 Age matters
- 9 Transference (≠ far transfer)
- 10 Interference (bad habits compete)

One honest loop: Prime → Train → Consolidate

1 · Prime

Open the window

Regulate state + attention, tied to a personally-meaningful goal.

2 · Train

Drive the change

One specific, adaptive session held in the ~85% challenge zone.

3 · Consolidate

Lock it in

Spaced review + sleep + reflection — where change sticks.

Wrapped around the loop:

the lifestyle levers (move · sleep · stress · novelty) as first-class plasticity inputs · honest baselines vs your own data · adaptive difficulty · personalization for individual variability · an evidence library of what we will and won't claim.

Five global segments, one shared need

Ryo · 34

Optimizer (beachhead)

Wants a rigorous, measurable edge — allergic to hype.

Margaret · 62

Worried-well aging

Dementia-anxious; needs credible, simple, doctor-aligned.

Priya · 22

Student

Focus & memory for exams, affordable, offline.

James · 45

Recovery (long-COVID)

Validated, graded, reimbursable cognitive recovery.

Elena · 52

Longevity

Brain as part of her healthspan stack; wants integration.

Dana · 43

Employer buyer

Daily-used, ROI-provable, privacy-safe cognitive wellbeing.

Sized honestly — bottom-up, not headline TAM

The discipline

- TAM \$58B — 730M cognitively-concerned digital adults × \$80/yr.
- SAM \$8.8B — income/motivation-qualified; aligns with the cited mental-health-app market.
- SOM ~\$103M — bottom-up Year-3 revenue build, not a top-down slice.
- Beachhead: NA optimizers/longevity (high WTP, reward honesty).

Consumer-led, B2B-leveraged, evidence-credible

**Free**

baseline + limited loop (growth)

Plus

\$12.99/mo · \$89/yr

Pro

\$19.99/mo + coaching

B2B + DiGA

\$4–8 PEPM · EU reimbursement

Hardware/biofeedback attach optional. B2B is the ARPU multiplier; DiGA adds credibility + reimbursement.

The honest, integrated middle no one owns

What only Limber does

- Integrates the FULL plasticity stack (practice + lifestyle levers)
- Adaptive ~85% challenge zone (the validated dose)
- Honest progress vs your own baseline — no leaderboards
- Evidence library: what we will & won't claim
- Personalized to individual variability
- World-class, accessible, global UX + optional DiGA track

Earn trust first — then scale through employers

1 • Creator & community

Science/longevity creators, podcasts, communities. Honesty earns this audience. Lowest-CAC, highest-trust.

2 • Employer / B2B

Cognitive-wellbeing via brokers (~17% CAGR channel); PEPM fixes consumer ARPU limits.

3 • Wearables + DiGA

Oura/Apple integrations for distribution; EU DiGA for credibility + reimbursement.

AARRR — retention is the crux

Acquire

creators + communities

Activate

value before signup

Retain

progress + ethical streaks + coaching

Refer

share progress; challenges

Revenue

Plus/Pro + B2B + DiGA

Honest risk register

Far-transfer / overclaiming (FTC)

Existential

Claims policy hard-wired; near-transfer + lifestyle only; legal review; cite everything.

Adherence (~70% churn)

Existential

Visible progress, ethical streaks, coaching, meaning-tether; prove in pilot.

Efficacy vs BrainHQ

High

Build & publish the evidence program early; honesty as the wedge.

DTx commercial trap (Pear/Akili)

High

Lead consumer/B2B; DiGA only where reimbursement is real.

The thesis, in one line

Train the brain the way it actually changes — honestly.

Neuroplasticity at the core · global · evidence-honest as the moat · world-class, accessible UX · reviewed against the Excellent rubric.

Deliverables: neuroplasticity science core · global market dossier · strategy · TAM/SAM/SOM + BMC · personas + empathy maps · IA & flows · interactive prototype · competitor analysis · BRD · GTM · this deck.
