

सुकून • SUKOON

Calm productivity for India's stressed minds.

Clear your head first — then do the one thing that matters. An India-first, evidence-backed product built on the neuroscience of why calm comes before focus.

Capstone Project • Market Research → Strategy → Personas → Flows → Prototype • June 2026

THE PROBLEM

A nation under load — and almost no one is reached

197M

Indians live with a mental health condition

Lancet/GBD, WHO India 2025

~85%

treatment gap for common mental disorders

NMHS / NIMHANS

0.75

psychiatrists per 100,000 (WHO min ~1)

Business Standard 2025

59%

of Indian employees show burnout

McKinsey 2023

...and the apps that exist don't stick.

~70% of wellness/productivity apps are abandoned within 100 days (JMIR 2024).

Calm & Headspace downloads are sharply off their 2018 peaks.

India's top-10 mental-health startups booked only ~₹100 Cr combined in FY24 — demand is huge, but the model, not the need, is the constraint.

Every category leaves the same wound open

Pure productivity

Todoist • Notion • TickTick

THE PAIN

Overdue tasks turn red → guilt, emotional loops, burnout.

Pure wellness

Calm • Headspace • Finch

THE PAIN

Operate in a vacuum — your to-do list is still waiting after you meditate.

The hybrids

Sunsama • Motion • Forest

THE PAIN

Premium pricing excludes; complex setup overwhelms; rigid schedules break.

None closes the loop between your real workload and a well-timed, evidence-based way to reset. That gap is Sukoon.

Most apps ask “what do you want to do?” Sukoon asks “how heavy is today?”

Light day

A quick win + a focus sprint.

Heavy day

Clear the head first (brain-dump → shred), then surface the ONE thing.

Survival day

Hide the list. Offer a “Bare-Minimum Day.” Validate, don't guilt.

Why it's defensible

- Works with NO calendar — a 5-sec check-in (corporate OAuth is often blocked).
- India data flywheel — what works for which load pattern, for Indian users.
- A human-care escalation layer platforms won't own.
- Stigma-safe surface with an employer data firewall.

Calm isn't a “nice to have.” It's the precondition for focus.

Chronic stress structurally shrinks the hippocampus & prefrontal cortex and grows the amygdala (McEwen 2016). The brain's learning window literally closes. So the order matters:

1 · REGULATE

Open the window

Cyclic-sigh breathing / NSDR shifts you parasympathetic, restoring the PFC.

Stanford RCT 2023 [Strong]

2 · FOCUS

Use the window

One attended task — attention is the plasticity gate. Hide the rest.

Kilgard & Merzenich [Strong]

3 · CONSOLIDATE

Lock it in

Close-the-loop reflection + spaced review + sleep — where change sticks.

Spacing & sleep [Strong]

Honest framing: we say “practice builds mental habits,” never “rewires your brain in 21 days.” Lumosity paid a \$2M FTC fine for over-claiming — that's our anti-pattern.

Four evidence-based personas — one shared trap

Aarav · 21

Placement-season student (beachhead)

Freezes under exam/placement stress; needs a private way to start.

Bhavna · 27

Burnt-out IT professional

Meditates, then a to-do list undoes it; fears employer seeing her data.

Sunita · 34

Overloaded working woman

No private minute; shared family phone; needs finishable 3-min resets.

Rahul · 41

HR / wellbeing buyer (B2B payer)

Needs daily-used, ROI-provable, privacy-safe wellbeing.

One calm loop, built for a heavy day

1 How heavy is today?

State-gate that adapts the whole session — no login, no streak to protect.

2 Brain-dump + Shred

Empty the racing mind into a private space, then literally shred it.

3 One important thing

Surface a single task; hide the rest. AI gently extracts it from your venting.

4 Bare-Minimum Day

On survival days, hide the list — water, one reply, rest. No guilt.

5 Reflect + sleep nudge

Close the loop and protect sleep — where progress consolidates.

6 Safe by design

Sub-clinical screener → warm handoff; crisis lines; stealth mode; data firewall.

► A clickable, interactive prototype ships with this deck — all screens, real interactions.

Big market — sized honestly (bottom-up, not vendor TAM)

The discipline

- TAM ₹32,600 Cr — 163M reachable users × ₹2,000 if all monetized.
- SAM ₹10,000 Cr — urban, employer/campus-reachable.
- SOM ₹41 Cr — modelled Year-3 revenue (bottom-up build).
- Cross-check: vendor “TAM” ₹4,283 Cr vs ₹103 Cr actual top-10 startup revenue — we plan to the reality, not the headline.

Consumer-feeling, B2B2C-funded

India D2C is brutal — paid cost-per-paying-user $\approx$ ₹133K. So D2C stays organic; employers & campuses pay.

3-Year revenue build (₹ Cr)

Free

₹0 — growth/brand engine (organic only)

Plus

₹149/mo · ₹1,499/yr

Pro

₹249/mo + à-la-carte counsellor ₹499/₹799

Teams (engine)

₹400/employee/mo + utilization bonus

Year 3 $\approx$ 56% of revenue from B2B (Teams + Campus). UPI single-push ₹49/wk as the entry rail.

Campus-first, then employers — the funnel feeds itself

1 • Campus

IIT/NIT/IIM placement-season; UGC counsellor mandate = institutional pull + payer. Fast 2-4 mo cycle.

2 • Employer EAP

Revenue engine. 86% of employees stressed; Re1→₹3-4 ROI; warm intros via alumni + CII.

3 • Vernacular creators

73% consume regional-language content; creators co-write in-app scenarios — low CAC + retention.

AARRR funnel — retention is the crux

Acquisition

Campus + creators + ASO (Hindi)

Activation

First “calm win” in <3 min

Retention

The loop + human touchpoints (beat ~70% churn)

Referral

Bring-a-stressed-friend; ambassadors

Revenue

B2B Teams + campus + à-la-carte

An unoccupied quadrant: India-contextual + balanced

What only Sukoon does

- Workload-aware wellness loop (no calendar needed)
- Brain-dump + Shred + adaptive “survival” mode
- Neuroplasticity Regulate→Focus→Consolidate spine
- Indian languages + scenario content; ₹149 anchor
- Stealth mode + shared-device PIN + employer firewall
- Responsible-AI: disclosed, anti-sycophant, crisis-escalating

Honest risk register

Retention (category ~70% churn)

Existential

The loop + human touchpoints + non-punitive design; prove via design-partner pilot before scaling.

**Platform encroachment
(Google/MS)**

High

Data flywheel + human-care layer + India localization + integration-optional loop.

India D2C economics

High

B2B2C-funded; D2C organic-only; UPI single-push default.

Clinical safety & DPDP/CDSCO

High

Sub-clinical screener, crisis protocol, employer firewall, advisory board, no diagnostic claims.

The wedge, in one line

Read the load. Regulate first. Then one focused thing.

Evidence-backed at every stage • India-first • responsible by design • reviewed against the Excellent rubric.

Deliverables: research dossier • neuroplasticity layer • strategy • TAM/SAM/SOM + BMC • personas + empathy maps • IA & user flows • interactive prototype • GTM & funnel • this deck.
